

Backup and Archive Solution

eMAM Vault and NEC HYDRAsstor[®]

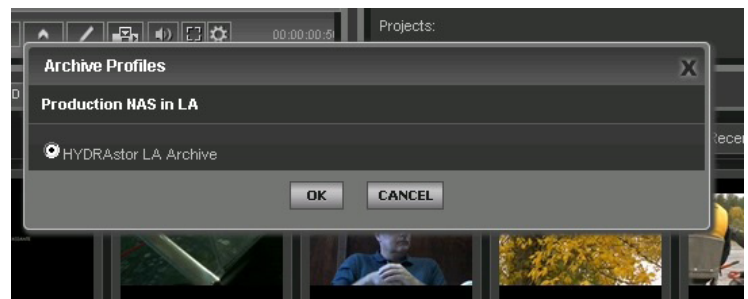

At a Glance

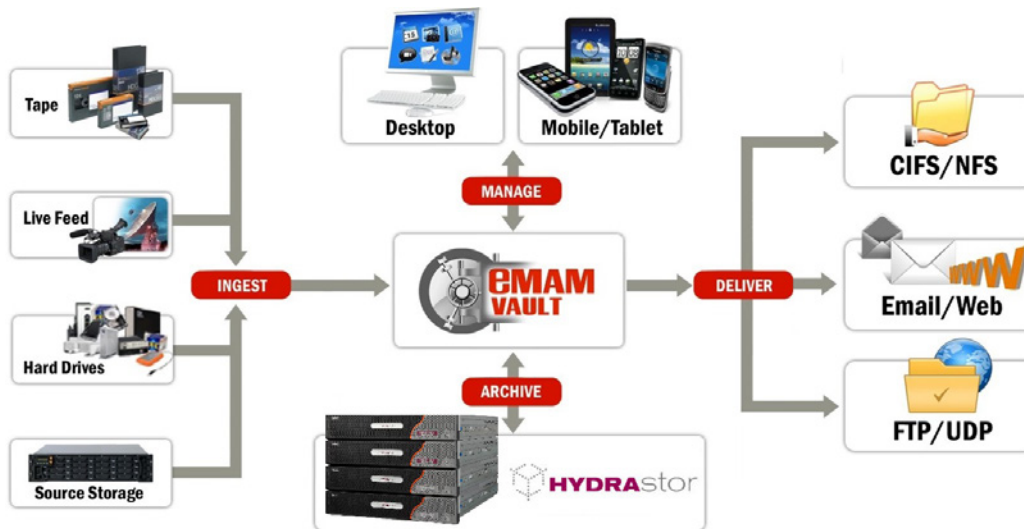

- **End-to-End Workflows:** Rich and powerful tool set for ingest, review, approval, archive, restore, sharing, and collaboration.
- **Easily accessible:** The powerful search engine makes it easy to find content using embedded and customized metadata.
- **Scalability and Performance:** Pay as you grow with modular storage from 1 to 165 nodes offering up to 7.9 PB RAW capacity and up to 178 TB/hr throughput.
- **Advanced Data Protection:** Erasure-coded data resiliency, protecting against up to six concurrent disk or node failures.
- **Secure data persistence:** Encryption at rest and WAN-optimized replication for disaster recovery.
- **In-place hardware refresh:** Support for multi-generation storage in a single grid.

Overview

Media and entertainment companies are facing the challenge of managing large amounts of ingested media to be delivered to various platforms in real time, driving the need for a powerful asset management system that delivers end-to-end workflows with flexibility to-scale capacity and performance. Integrating complex workflows with backend server and storage infrastructure requires significant investment of resources for system integration. Our integrated asset management and infrastructure solution provides easy workflows and pre-configured storage resources to keep up with the challenges of growing data, management complexities and limited IT staff.

The eMAM and NEC HYDRAsstor combined solution provides customers with comprehensive collaboration tools and tiered storage management for media assets from ingest to delivery and archive.

eMAM + HYDRAsTOR Solution Benefits

This integrated asset management, archive and restore solution provides the following benefits.

- Integrated solution from eMAM and HYDRAsTOR minimizes IT administration cost using pre-configured media content archiving.
- Effective use of active archiving reduces the cost of primary storage.
- Easy to use eMAM GUI minimizes training requirements and maximizes user acceptance and productivity.
- Global Namespace provides fast and flexible access to media assets.
- No migration required while expanding the system to support changing media format, higher retention period, increased number of feeds.
- No loss of media asset at any point with storage high availability and disaster recovery.
